

URBAN AIR MOBILITY

SPECIAL SESSION TRANSPORT AND TRAFFIC ANALYTICS IN SMART CITIES

WHY THIS YEAR THE URBAN AIR MOBILITY?

UAM offers a promising opportunity to mitigate existing surface congestion by integrating an additional dimension in the urban mobility landscape, which is particularly promising option for the emergency services, which allows extension of current capabilities of the mobility system in life critical/threatening situations as emergency medical logistics, search and rescue or firefighting. Nonetheless, to be able to integrate such services in an efficient, meaningful, and sustainable manner still a number of challenges need to be tackled and this special session aims to serve as a platform to support discussion and exchange of ideas in this context.

PROGRAM COMMITTEE

prof.dr.sc. Ivana Semanjski, Ghent University, Belgium
prof. Antonio Pratelli, University of Pisa, Italy
prof. dr. Massimiliano Pieraccini, University of Florence, Italy
mr.sc. Silvio Semanjski, SEAL aeronautica, Spain
prof. dr. ir. Sidharta Gautama, Ghent University, Belgium
prof. Massimiliano Petri, University of Pisa, Italy

Prof. Michele Basso, University of Florence, Italy
Andreina Chietera, Thales, France
Olivier Broca, Siemens, France
Kathryn Bulanowski, EPF, Belgium
Jiri Karpeta, Robodrone, Czech Republic

IMPORTANT DEADLINES:

Submission (full paper): September 30, 2022

Acceptance: October 15, 2022

Registration: October 20, 2022

Camera ready: October 30, 2022
